Quality Outreach

Introduction

The Adoption Group are promoting the testing of Free Open Source Software (FOSS) projects with OpenJDK builds, whether their own, or from someone else. We want to acknowledge projects who are actively testing, providing feedback and list any issues they have found during their testing. This is a great way to improve the quality of the various releases, adding new projects to the list is highly desirable.

If you would like to have your Project added to the list below, please send an email to [quality-discuss](#) or [adoption-discuss](#) mailing lists.

If you haven't already subscribed to these lists then please do so first, otherwise your message will be discarded as spam.

Status indicators

- Indicates we have active testing , feedback & bug reporting on some or all JDKs
- Indicates we have intermittent communication on some or all JDKs
- Indicates will start testing in the near future
