

Commit Commands

Project Skara provides committers with additional commit commands that enable additional functionality. A *commit command* is a comment made to a commit that starts with a slash ("/"), for example `/tag` or `/backport`.

Commands

- [/backport](#)
 - [Syntax](#)
 - [Description](#)
 - [Examples](#)
- [/tag](#)
 - [Syntax](#)
 - [Description](#)
 - [Examples](#)
- [/help](#)
 - [Syntax](#)
 - [Description](#)
 - [Examples](#)

`/backport`

Syntax

```
/backport <repo> [ <branch> ]
```

Description

Applies the commit onto the given branch in the given repository and then proceeds to create a [backport pull request](#) targeting the given repository and branch. The branch is optional and defaults to the `master` branch. If the commit does not apply then an message is shown describing the files containing conflicts.

Examples

- `/backport jdk16u`
- `/backport jfx jfx14`

`/tag`

Syntax

```
/tag <name>
```

Description

Creates a tag for the commit with the given name.

Examples

- `/tag jdk-16+22`
- `/tag 15.0.1+1`

`/help`

Syntax

```
/help
```

Description

Shows help for all commit commands.

Examples

- `/help`
